Art Unit: 1714

1. Claims 33 and 34 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 33 recites the limitation "a compound of formula [1] " in line 3. There is insufficient antecedent basis for this limitation in the claim. There is no compound [1] depicted.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 29-45 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Dunn et al, RE37,950.

3. Dunn et al discloses an injectable composition consisting of a bioactive substance and esters of hydroxycarboxylic acids such as lactic acid and glycoic acid. The compositions coagulate after injection into the mammal to form a prosthetic device. See col. 2, line 62 through col. 9, line 30. Patentee indicates that combinations of the esters of hydroxycarboxylic acids may be used. See col. 4, line 54 through col. 5, line 9. Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to use a combination of esters

of hydroxycarboxylic acids in the same manner as set forth in applicant's claims, absent a clear showing of unexpected results attributable to such a combination..
